

ENGINEERED WOOD OILED CARE GUIDE

Sweep & Vacuum

Sweep or vacuum with a soft-bristle brush head regularly to prevent abrasion or debris scratching.

Mopping

To clean. Use a damp microfiber mop with a cleaner specifically made for oiled wood. Avoid steam mops or excess water, which can cause warping.

Furniture

Use felt pads under furniture, place doormats at entrances, and avoid walking on the floor with high heels or cleats. Immediately wipe spills to avoid stains or swelling.

Scratches

Minor Scratches or Dullness: Lightly sand the affected area by hand using a fine-grit sandpaper (180–220 grit), then reapply a small amount of oil and buff gently.

Oiling

Re-oil 6-12 months. Clean the floor, allow it to dry, then apply a thin coat of maintenance oil using a cloth or mop. Let it absorb, then buff off any excess. Always follow the oil brand's drying and curing time.
